ankylosing spondylitis, ulcerative colitis, primary sclerosing cholangitis, appendicitis, diverticulitis, and primary biliary sclerosis. This polynuclectide is a DNA sequence representing human mRNA that is differentially expressed in patients with SLE, used in an exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          181 IleProGlyLeuLysArgLysAlaGlu

Specifically, it refers to the identification of genes that have a clinical utility as diagnostic tools for the management of, in particular, patients with systemic lupus erythematosis (SLE) or rheumatoid arthritis (RA). Accordingly, the present invention describes a method for determining the levels of multiple differentially expressed genes of a patient, in a concerted manner, in order to achieve an improved diagnostic assay with sensitivity and specificity for the disease in question. As such, these genes are useful for the diagnosis of various other inflammatory disorders including cholecystitis, Sjogren's disease, CREST syndrome, scleroderma,

This invention describes a novel disease detection and treatment molecule polypeptide (MDDT) which has anti-inflammatory, immunosuppressive, osteopathic, cytostatic, anti-HIV, haemostatic, nephrotropic, antianaemic, antipsoriatic and hepatotropic activity. The polynucleotides and the polypeptides of the invention can be used for gene therapy, protein replacement therapy and are useful for treating a variety of diseases or conditions. These polypeptides or polynucleotides are particularly useful for diagnosing, treating or preventing cell particularise disorders (e.g. cancers including adenocaricinoma, leukaemia, lymphoma, melanoma, myeloma or sarcoma), anaemia, Crohn's disease, acquired immunodeficiency syndrome (ADDS), Goodpasture's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ij
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New purified disease detection and treatment molecule proteins and polynucleotides, useful for diagnosing, treating or preventing cancers (e.g. leukemia or sarcoma), anemia, Crohn's disease, AIDS, osteoporosis or hepatitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     syndromes, inflammation, osteoporosis, thrombocytopaenia, psoriasis or hepatitis, ABX34410-ABX34835 encode the MDDT polypeptides represented i ABU11450-ABU11485, described in the disclosure of the invention. NOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format from WIPO at
anaemia; Crohn's disease; acquired immunodeficiency syndrome; AIDS; Goodpaature's syndrome; inflammation; osteoporosis; thrombocytopaenia; psoriasis; hepatitis; gene; ss.

This invention relates to a novel method for modulating the expression of a target gene in a cell. Specifically, it refers to the introduction into a call of a polynucleotide that forms a duplex region with an mRNA transcribed from the target gene, where the duplex region with an mRNA transcribed from the target region i.e. a non-coding microRNA (miRNA) that regulates mRNA at a post-transcriptional level. The present invention describes a method for controlling ontogenesis of a mammalian cell, differentiation of a mammalian cell or viability of a mammalian cell, differentiation of a mammalian cell or viability of a mammalian cell in the post-transcriptional phase, which comprises introducing a plasmid vector comprising a promoter and nucleic acid collecule expressing an miRNA or siRNA silencing precursor to the miRNA. Accordingly, it provides a cell therapy method for treating cancer, mammalian disease, nerve disorder (e.g. amyotrophic lateral sclerosis, parkinson's disease, or Alzheimer's such, they can be developed into pharmaceutical compositions that exhibit cytostatic, immunosuppressive, noctropic, neuroprotective and antihinflammatory activities and hence can be used for immunotherapy. This polynucleotide sequence is a human target
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      gene whose expression is modulated by miRNAs of the invention.

AAB64471 to AAB64548 represent human secreted polypeptide sequences and proteins homologous to them, which are given in the exemplification of the present invention. Human secreted proteins have activities based on the tissues and cells the genes are expressed in. Examples of activities include: antiarthritic; immunosuppressive; antirheumatic; antiproliferative;

Cycostant; datalant, wasotropic; cerebiroprotective; notitopic; cerebiroprotective; antibacterial; virucide; fungicide; and ophthalmological. The polymucleotides and polypeptides can be used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition or susceptibility to a pathological condition. Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. neoplasms of the breast or liver, cardiovascular disorders c.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders infections caused by bacterial, viruses and fungi and ocular disorders infections. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities. AAR32690 to AAR32698 and AAB64421 represent sequences used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1461
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1401

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence is that of cDNA encoding human NOGO-C (see AAB82348). NOGO-C is a novel splice variants of the human NOGO-G one chromosome 22pl. 2 Other splice variants. NOGO-A and NOGO-B, have previously been identified. The invention provides NOGO-C polypeptides and polynucleotides, and methods for producing such polypeptides by recombinant techniques. Also disclosed are methods for utilising NOGO-C polypeptides and polynucleotides in the treatment of diseases including neuropathies, spinal injury. brain injury, stroke, neuronal degeneration, for example Alzheimer's disease and Parkinson's disease, neuromuscular disorders, psychiatric disorders and developmental disorders. Also provided are methods for identifying agonists and agonists for use in treating conditions associated with NOGO-C imbalance, and diagnostic

sclerosis. Also antisense nucleic acids and artagonists of NSPLP can be used to inhibit activity of the NSPLP proteins. Antibodies specific for used to inhibit activity of the NSPLP proteins. Antibodies specific for NSPLP are used for diagnosis and monitoring treatment of diseases associated with NSPLP expression, in usual immunoassays, and to isolate NSPLP from natural sources. The NSPLP proteins, or their fragments can also be used in drug screening to identify NSPLP antagonists. The nucleic acid can be used diagnostically and for monitoring treatment (in hybridisation or amplification assays); to isolate closely related sequences; in gene therapy for both sense and antisense applications (including use of ribozymes) and for mapping the natural genomic sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      407
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   167

                                                                                                                                                                                                                                                                                                                                                                                                                                                      This sequence encodes a human neuroendocrine-specific protein-like protein (NSPLP) of the invention. Recombinant cells transformed with the DNA are used to express the NSPLP proteins, which are used to treat cancer and neurodegenerative diseases such as amyotrophic lateral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        41

The MAGI protein can be expressed by standard recombinant methodology. The MAGI polypeptides, polynucleotides and antibodies are useful for treating diseases, including neuropathies, spinal injury, neuronal degeneration, neuromuscular disorders, psychiatric disorders and developmental disorders, cancer, stroke and inflammatory disorders. The polynucleoited is also useful for chromosome localization and for tissue expression studies. The present sequence represents a DNA encoding the human MAGI protein variant

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             795
                                                                                                                                                                                                          The present sequence is that of cDNA encoding human NOGO-B (see AAB82350). NOGO-B is a previously known splice variant of the human NOGO gene on chromosome 2p21. The invention relates to a novel NOGO gene splice variant, NOGO-C (see AAF90323). It provides NOGO-C polypeptides and polynucleotides, and methods for producing such polypeptides by recombinant techniques. Also disclosed are methods for utilising NOGO-C polypeptides and polynucleotides in the treatment of diseases including neuropathies, spinal injury. brain injury, stroke, neuronal degeneration, for example Alzheimer's disease and Parkinson's disease, neuromuscular for example Alzheimer's disease and developmental disorders. Also provided are methods for identifying agonists and agonists for use in treating conditions associated with NOGO-C imbalance, and diagnostic assersys for detecting diseases associated with inappropriate NOGO-C
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              675

This sequence represents a nucleic acid molecule which encodes a secreted human protein. The gene number, and the clone it is derived from, are detailed in the descriptor line. The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin for portion (e.g. AAX04302) for increasing the stability of the fused protein as genes and their fragments (nucleic acid sequences: AAX04311-X04410; amino acid sequences AAW78126-W78225) which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new polynucleotides. Specific uses are described for each of the 86 polynucleotides, based on which tissues they are most highly expressed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                101
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                547
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 607
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    141
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   667

```
The invention relates to human RTN4B protein and coding sequence, useful for providing a cDNA sequence of human RTN4B. The protein is an isomer of RTN4 with RTN family members. The present invention also refers to polypeptide encoded by a nucleotide sequence and manufacturing method and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    GluGluLeuValGlnLygTyrSerAsnSerAlaLeuGlyHisValAsnCysThrIleLys 101

The products of the invention have cytostetic, neuroprotective, immunosuppressive, antirheumatic, antiarthritic, dermatological, antiinflammatory, hepatotropic, virucide, nootropic, anticonvulsant, antiparkinsonian, vasotropic, cerebroprotective and antialcoholic activity and can be used for gene

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             61
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               81
therapy. The polynucleotides also related vectors, hosts (or their extracts), encoded polypeptide (or their receptors) and/or agents that inhibit their activity (including antisense sequences) are used for treatment or prevention of tumours, autoimmune or degenerative disease and viral infections, specifically leukaemia, carcinoma, sarcoma, multiple sclerosis, rheumatoid arthritis, diabetes, lupus, or infection with hepatitis or influenza viruses, Alzheimer's, Huntington's or Parkinson's disease, reperfusion injury, stroke and alcoholic liver disease. Detection of the polynucleotides and derived polypeptides can also be used for diagnosis of these diseases. This sequence encodes an apoptosis-associated protein described in the disclosure of the

AAZ3628-49 encode bone marrow secreted proteins of human bone marrow stromal cells. The proteins can exhibit cytokine, cell proliferation, or cell differentiation activity (either inducing or inhibiting). They can be used to support colony forming cells or factor-dependent cell lines, to regulate hematopoiesis, and to treat myeloid or lymphoid cell lines, to regulate hematopoiesis, and to treat myeloid cell lines, to proliferation of erythroid progenitor cells, and to treat various an emakas. They can have colony simulating factor (CSF) activity and can be used to support the growth and proliferation of myeloid cells such as granulocytes, monocytes or macrophages, to prevent or treat myelo.

Suppression, to support the growth and proliferation of megakaryocytes and platelers, thereby allowing prevention or treatment of platelet disorders such as thrombocytopenia, to support the growth and coliferation of megakaryocytes and platelers, thereby allowing prevention or treatment of platelet disorders, such as aplastic anaemia and paroxysmal nocturnal hemoglobinuria, or to repopulate the stem cell compartment after irradiation or chemotherapy. They can be used for growth or differentiation of bone, cartilage, tendon, ligament, or nerve tissue, as well as for wound healing and the remain and replacement, and in the treatment of burner incorpination or the content of burner, in the content of burner, and an order or the content of the content or the content or the content of the content or the content or the content or the content or the content or the content or the content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content or content o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         and ulcers, to induce cartilage and/or bone growth in circumstances where bone is not normally formed and thus have an application in healing bone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             use in fracture

The invention relates to a method of detecting an autoimmune disorder in a subject comprising obtaining a biological sample, preferably a peripheral blood mononuclear cell, from a subject, determining expression levels of at least two genes in the biological sample, and comparing the expression level of each gene determined with a standard, where the comparison detects the presence of an autoimmune disorder in the subject. The method is useful for detecting or diagnosing an autoimmune disorder, e.g. rheumatoid arthritis, systemic lupus erythematosus, multiple selenosis, or type 1 (insulin-dependent) diabetes. The present sequence represents one of seventy genes used to detect autoimmune disorders with the described method.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   486

The present invention relates to a new method of identifying modulators of Nogo function or BACE activity. The method involves providing Nogo and BACE by peptides capable of binding with each other, monitoring the interaction between these polypeptides, and determining if the test agent is a modulator of Nogo or BACE activity. The method is useful in treating caute neuronal injuries, such as spinal or head injury, stroke, peripheral nerve damage, and in neoplastic (e.g. glioblastomas), hyperproliferative or dysproliferative disorders (e.g. cirrhosis, psoriasis, keloid formation, fibrocystic conditions, tissue hypertrophy) of the central nervous system. The BACE polypeptide is useful in screening methods to identify agents that may act as modulators of BACE activity and in particular agents that may be useful in treating Nogo-associated diseases. The modulators of Nogo or BACE polypeptides, and the polymuclectide encoding the EACE polypeptide are useful in cemponal and medicament for the treatment or prevention of disorders captomative to the modulation of Nogo activity, in alleviating the symptoms or improving the condition of a patient suffering from this disorder, in axon regeneration, or in preventing metastasis or spreading a season a proche in accer. The polypulant properties and in generation of a season and in generation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Identifying modulators of Nogo or BACE activity for treating acute neuronal injuries, neoplastic or dysproliferative disorders, comprises providing and monitoring interaction between Nogo and BACE polypeptides.

The invention relates to an isolated polymucleotide (I) comprising: (a)

any of a group of over 4000 nucleotide sequences (ABV94628-ABV99145); (b)

complements of (a); (c) sequences consisting of at least 20 contiguous

residues of (a); (d) sequences that hybridize to (a), under moderately

stringent conditions; (e) sequences having at least 75% or 90% identity

con (a); or (f) degenerate variants of (a). Polymeptides (ABP68556-

ABP68637) encoded by (I) and oligonucleotide can be used to detect cancer

in a patient and compositions comprising polymeptides, polymucleotides,

antibodies, fusion proteins, T cell populations and antigen presenting

colls expressing the polymeptide are useful in treating parcreatic cancer

and stimulating an immune response. The polymucleotides can be used as

probes or primers for nucleic acid hybridisation, in the design and

preparation of ribozyme molecules for inhibiting expression of the tumour

polymeptides and proteins in the tumour cells, in vaccines and for gene

therapy. Note: The sequence date for this patent did not form part of the

printed specification, but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 936
                                                                                                                                                                                                                                                for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   756
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    816
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   876
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  GluGluLeuValGlnLysTyrSerAanSerAlaLeuGlyHisValAsnCysThrIleLys 101
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                GluLeuArgArgLeuPheLeuValAspAspLeuValAspSerLeuLysPheAlaValLeu 121
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     41

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              reticulum protein, designated Nogo B. Nogo B has cytostatic activity and is a modulator of the storage and exchange of calcium, cell growth and cellular stress response. It can: regulate oxidative stress; inhibit neurite outgrowth, neuron growth and axon regeneration. Nogo B polypeptides and polymucleotides are useful for modulating stress levels and cellular stress-response, cell growth and viability, diagnosis and treatment of cancer, malignant growth and other Nogo B related diseases. Wood B polypeptides are also useful to screen combinatorial libraries to identify agonist or antagonist. Antibodies against Nogo B polypeptides are useful for affinity chromatography and distinguishing Nogo B.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel protein associated with cell stress response useful for modulating stress levels, cell growth, diagnosis and treatment of cancer and malignant growth and for identifying agonists and antagonists.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; Nogo B; cell stress response; hyperphosphorylated; brain tumour; stress-phosphorylated endoplasmic reticulum protein; cytostatic; gene therapy; cell growth; cellular stress response; neuron growth; regulator of oxidative stress; inhibitor of neurite outgrowth; axon regeneration; diagnosis; cancer; identification; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This invention relates to a novel primers useful for synthesising full length cDNA molecules that encode human proteins. Specifically, it refers to secretory or membrane proteins that are potential therapeutic agents/ target molecules in the field of medicine, and in particular genes encoding proteins that are associated with signal transduction, and slycoproteins and transcription. The present invention describes a method for efficiently cloning a full length human cDNA from both the 5' and 3' ends using the oligo-capping method. This polynucleotide sequence is a full length human cDNA clone of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    LeuPheLeuLeuLeuSerLeuThrValPheSerlleValSerValThrAlaTyrlleAla
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   788 GTTGTTGACCTCCTGTACTGGAGAGACATTAAGAAGACTGGAGTGGTGTTTGGTGTGTCAGC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             2 ValValAspLeuLeuTyrTrpArgAspIleLysLysThrGlyValValPheGlyAlaSer

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1207
                                                                                                                                                                                                                                                                       clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a full length human cDNA of the the printed specification, but was obtained in CD-ROM format directly from EPO.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               101
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       121
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           141

                                                                                                                                                                                                                                                                                   sequence of the invention. The secreted proteins can be used in treating or controlling a variety of human conditions. The secreted proteins may act as cytokines or may affect cellular proliferation or differentiation or may act as immune system regulators, haematopoiesis regulators, tissue growth regulators, regulators of reproductive hormones or cell movement or have chemotactic/chemokinetic, receptor/ligand, anti-inflammatory or tumour inhibition activity. The DMAS can be used in forensic procedures to identify individuals or in diagnostic procedures to identify individuals or in diagnostic procedures to identify individuals to the extended collaboral expression of the genes corresponding to the extended collaboral also useful for constructing a high resolution map of the human chromosomes. They can also be used for gene therapy to control or treat genetic diseases

The invention relates to human cDNA sequences that encode human secreted proteins. The invention also relates to an antibody that specifically binds to a polypeptide of the invention and amethod of binding the polypeptide to an antibody. The polymucleotides are useful for expressing the entire secreted proteins which they encode and for distinguishing human tissues and cells, and for distinguishing between human tissues and cells, and for the polymucleotides comprising the cDNAs. The polymucleotides and polymer special in forensic procedures or diagnostic procedures to individuals with genetic diseases resulting from abnormal expression of the genes corresponding to the cDNAs. The sequences are also useful in gene therapy to control or treat genetic diseases. This sequence taptesents a human secreted polymucleotide of the invention.

Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from USPTO at
New isolated polynucleotide encoding secreted polypeptide, useful for gene therapy, or in diagnostic procedures to identify individuals having genetic diseases resulting from abnormal expression of the genes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 994 BP; 283 A; 175 C; 232 G; 304 T; 0 U; 0 Other;

The invention relates to a composition comprising a plurality of CDNAs CC for detecting the altered expression of genes in an immunological cordetecting the altered expression of genes in an immunological cordetecting the invention also relates to a method of diagnosing or monitoring the treatment of an immunopathological condition in a sample, comprising obtaining nucleic acids from a sample, contacting the nucleic acids of the sample with an array comprising the plurality of CDNAs under conditions to form one or more hybridisation complexes and comparing the levels of the detected in a non-diseased sample, where an altered level of the detected hybridisation complexes with the level of hybridisation complexes correlates with the presence of an immunopathological condition. Also disclosed are an expression profile comprising a microarray and a plurality of detectable complexes and a comprising a microarray and a plurality of polynucleotide probes. The cDNAs are useful as hybridisable array elements in a microarray for monitoring the expression of target polynucleotides. The microarray for monitoring the expression of target polynucleotides. The microarray for monitoring the expression of target polynucleotides. The microarray can be used in the expression of target polynucleotides. The microarray can be used in drug discovery and development, toxicological and carcinogenicity studies, formerics or pharmacogenomics. The composition carcinogenicity studies, formerics or pharmacogenomics. The composition carcinogenic fragments. The present invention describes a method for identifying an agent for treating a diabetic or pre-diabetic individual. The method comprises contacting an agent to a mixture comprising a polypeptide encoded by a nucleic acid that hybridises under stringent conditions to a nucleic acid that hybridises under stringent conditions to a nucleic acid conceding any of the 23 fully defined amino acid sequences given in the specification, and selecting an agent that modulates the expression or activity of the polypeptide. Also described: (1) a method of treating a diabetic or pre-diabetic animal, comprising administering to the animal acid therefore the animal acid amount of an agent identified by the method described above; (2) a method of introducing an expression cassette into a cell, comprising introducing into the cell an expression cassette comprising a promoter operably linked to a polynucleotide encoding a polypeptide, where the polynucleotide hybridises under stringent conditions to a uncleic acid encoding the above amino acid sequences; and (3) a method of diagnosing an individual who has Type 2 diabetes or is pre-diabetic, comprising detecting in a sample from the individual the level of the polypeptide or the level of the above-mentioned polynucleotide encoding the above-mentioned polynucleotide in the sample compared to a level of the polypeptide or comprising or the level of the above-mentioned polynucleotide in either a lean individual is diabetic or pre-diabetic. The method is useful in diagnosing and treating diabetes, insulin resistance or related metabolic diseases in human subjects or pre-diabetic. The method is useful in diagnosing and treating diabete; insulin my also be used in identifying agents for treating diabetic or pre-diabetic or pre-diabetic insulvalual. Identifying an agent for treating diabetic or pre-diabetic individuals comprises contacting an agent with a polypeptide, e.g., human ceramidase, and selecting an agent that modulates the expression or activity of the Disclosure; SEQ ID NO 87; 209pp; English present invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes a binding molecule which binds to human NogoA polypeptide, human NiG-D20 or human NogoA 623-640 with a dissociation constant of less than 1000nM. Also described: (1) a polymuclectide encoding the binding molecule; (2) an expression vector or system comprising the polymucleotide; (3) a host cell comprising the expression system; (4) a pharmaceutical composition comprising the binding molecule and a carrier or diluuent; and (5) treating diseases associated with nerve repair. The binding molecule has neuroprotective activity, and can be used in gene therapy. The binding molecule is useful in preparing a composition for treating central nervous system (CNS) injury or neurodegenerative disorders. The present sequence encodes rat NegoA, which is used in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                            8
                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence is a cDNA encoding rat Nogo A protein which is a potent neural cell growth inhibitor and is free of all central nervous system (CNS) myelin material with which it is natively associated. The present sequence was generated by fusing NO18U37-3, R1-3U21 cDNA sequences isolated from hexanucleotides-primed rat brain stem/spinal cord library, and Oli18 cDNA from an oligo d(T)-primed rat oligodendrocyte clibrary. Nogo proteins and fragments displaying neurite growth inhibitory activity are used in the treatment of neoplastic disease of the CNS e.g. glioma, glioblastoma, medulloblastoma, craniopharymgioma, ependyoma, cpinealoma, haemangioblastoma, acoustic neuroma, oligodendroglioma, cpinealoma, haemangioblastoma or retinoblastoma and degenerative nerve diseases e.g. Alzheimer's and Parkinson's diseases. Therapeutics which promote Nogo activity can be used to treat or prevent hyperproliferative disorders e.g. psoriasis and tissue cor bromote structural plasticity of the CNS in disorders where neurite cromote structural plasticity of the CNS in disorders where neurite cromodels can be used in disquestic and screening methods for predisposition cor maintenance are deficient or desired. The animal cord provent disorders and to screen for or test molecules which can treat or cord cord cromoders or test molecules which can treat or referred in claim 32 and SEO ID NOS. Notes DID numbers 35-42 are creferred in claim 32 and SEO ID NOS. 29 in disclosure of the

```
central/peripheral nervous system from injury/disease, comprises administering nervous system-specific activated T cells/antigen, analogs/peptides.
```

Disclosure; Page 40-44; 93pp; English.

The invention relates to promoting nerve regeneration or conferring central/peripheral nervous system (NS). The method involves administering central/peripheral nervous system (NS). The method involves administering (NS-specific antigen, its analogue or its peptide, a nucleotide sequence the NS-specific antigen or its analogue or combinations. The method is useful for promoting nerve regeneration and preventing neuronal degeneration in central/peripheral nervous system from injury/disease, where the injury is spinal cord injury, blunt frauma, penetrating trauma, hemorrhagic stroke, ischaemic stroke or damages caused by surgery such as tumour excision. The disease is not autoimmune disease or neoplasm. The disease results in a degenerative contournating in either gray or white matter or both. The disease is disease, facial nerve (Bell's) palsy, glaucoma, Huntington's chorea, amyotrophic lateral sclerosis, non-arteritic optic neuropathy, and vitamin deficiency, intervertebral dise hernialiton, prion diseases such as Creutzfeldt-Jakob disease, carpal tunnel syndrome, peripheral to uremia, porphyria, hypoglycemia, Sjorgren Lareson syndrome, acute sensory neuropathy, chronic ataxic neuropathy, biliary cirrhosis, primary amyloidosis, obstractive lung diseases, acromegaly, malabsorption syndromes, polycythemia vera, immunoglobula, in [19]A and 1gG gamma-pathies, complications of various drugs (e.g., metronidazole) and toxins (e.g., alcohol or organophosphates), Charcot-Marie-Tooth disease, ataxia atelangectasia, Friedreich's ataxia, amyloid polyneuropathies, adrenomyloneuropathy, Giant axonal neuropathy, Refsum's disease, Fabry's disease, or lipoproteinemia. The present sequence represents a DNA encoding the rat neurotransmitter receptor protein Nogo (Nogo-A, Nogo-B and Nogo-C), an example of NS-specific antigen

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a novel isolated gene sequence that is down-regulated in the spinal cord in response to streptozocin-induced diabetes, or comprising, hybridising or having at least 80% sequence identity to a sequence whose expression products are kinases, phosphatases, ion channel proteins, receptors, transporters, G-protein coupled receptor proteins, DNA-binding proteins, proteases or enzymes, given in the specification. A gene of the invention has analgesic activity, and may have a use in gene therapy. The gene sequences, vector, host cell, animal, polypeptide and antibody are useful for screening of compounds for diagnosing or treating pain. The kits are useful for simultaneous, separate or sequencial detecting and/or quantifying downsubulation of a gene sequence in the spinal cord of a mammal in response to streptozocin-induced diabetes. The compound or pharmaceutical composition is useful as a medicament for treating or diagnosing pain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           rat; streptozocin; kinase; phosphatase; ion channel protein; receptor; transporter; G-protein coupled receptor; GPCR; DNA-binding proteins; protease; enzyme; analgesic; gene therapy; pain; diabetes; ds; gene.

The invention relates to a method of identifying compounds that influence fat cell number or size comprising providing a cell that expresses a gene and an agent, exposing the cell to the agent and identifying fat cell number or size relative to cells not exposed to the agent. The method also comprises providing an expression vector and an agent, exposing the cells not expression of the gene in an expression of the gene crelative to expression of the gene in an expression vector not exposed to the agent, treating a subject with the agent comprises an antisense coligonucleotide. The subject to comprises a mammal, preferably a human. The method also comprises providing a polypeptide and an agent, exposing the olypeptide or a change in an activity of the polypeptide, treating a subject that the agent comprises an antibody. A method of requising fat cell number or size comprises providing a subject containing fat cells and an agent that changes the expression of a gene, and treating the subject with the agent under conditions so that fat cell size or number in the agent that changes the expression of a gene, and treating the subject with the agent under conditions so that fat cell size or number in the agent that cell number or size of number or size of number or size or number in the conditions of the fat cell size or number in the agent that cell number or size, for preparing a composition for treating or preventing obesity or diabetes. This sequence represents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     3099
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           2920 reagrigiteacerecreraciesasasacarriaasaasaeresasiterarriresr 2979

```
potent neural cell growth inhibitor and is free of all central nervous system (CNS) myelin material with which it is natively associated. Nogo proteins and fragments displaying neurite growth inhibitory activity are used in the treatment of neoplastic disease of the CNS e.g. glioma, glioblastoma, medulloblastoma, craniopharyngioma, ependyoma, pinealoma, campioblastoma, acoustic neuroma, oligodendrogalioma, menagioma, neuroblastoma or retinoblastoma and degenerative nerve diseases e.g. Alzheimer's and Parkinson's diseases. Therapeutics which promote Nogo crivity can be used to treat or prevent hyperproliferative or benign dysproliferative disorders e.g. psoriasis and tissue hypertrophy.

Ribozymes or antisense Nogo nucleic acids can be used to inhibit con production of Nogo protein to induce regeneration of neurons or to production of Nogo protein to induce regeneration of neurons or to promote structural plasticity of the CNS in disorders where neurite growth, regeneration or maintenance are deficient or desired. The animal codels can be used in diagnostic and screening methods for predisposition to disorders and to screen for or test molecules which can treat or treat in classification of the CNS. Note: SEQ ID numbers 35-42 are referred in claim 32 and SEQ ID NO: 29 in disolosure of the creating or referred in claim 32 and SEQ ID NO: 29 in disolosure of the creating or the contraction of the creating method in claim 20 and SEQ ID NO: 29 in disolosure of the creating or the contraction of the creating method in claim 20 and SEQ ID NO: 29 in disolosure of the creating or the contraction of the creating method in claim 20 and SEQ ID NO: 29 in disolosure of the creating or the contraction of the creating method in claim 20 and SEQ ID NO: 29 in disolosure of the creating contraction or contraction or contraction or contraction or contraction or contraction or contraction or contraction or contraction or contraction or contraction or contraction or contraction or contraction or contraction or contraction or contract
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Nogo proteins and nucleic acids useful for treating neoplastic disorders of the central nervous system and inducing regeneration of neurons.

secreted proteins. Novel cDNA clauses (see AAV39916-32) coding for human secreted proteins (see AAW58580-90) are claimed. These can be used for recombinant production of the secreted proteins for analysis, characterisation, diagnostic or therapeutic use. They can also be used as tissue or mol.wt. markers, for chromosome identification, to identify genetic disorders, to isolate new related DNA, as sources of primers for PCR, to generate antibodies, and in interaction trap assays. The secreted immunomodulator, haematopoiesis regulating activity, tissue growth activity, activity nor inhibin activity, chemotactic or chemokinetic activity, activity or inhibin activity, chemotactic or chemokinetic activity, antiinflammatory, cabherin and tumour invasion suppressor activity, and tumour inhibition activity. The proteins can be expressed in vivo from DNA, introduced in gene therapy vectors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1656 ATCCAGAAATCAGATGAAGGCCACCCATTCAGG-------GAAGTTGCTATA 1700

It was isolated from a human adult brain cDNA library using methods selective for cDNAs that encode secreted proteins. The clone is deposited in composite clone ATCC 98232; an oligonuclectide (see AAT99725) is designed to isolate the clone from the composite. The

The present invention relates to a new method of identifying modulators of Nogo function or BACE activity. The method involves providing Nogo and BACE properties and control other interaction between these polypeptides, and determining if the test agent interaction between these polypeptides, and determining if the test agent is a modulator of Nogo or BACE activity. The method is useful in treating content in the neuronal injuries, such as spinal or head injury, stroke, peripheral nerve damage, and in neoplastic (e.g. glioblastomas).

Controlastomas), hyperproliferative or dysproliferative disorders (e.g. cirrhosis, progriasis, psoriasis, psoriasis, psoriasis, keloid formation, fibrocystic conditions, tissue hypertrophy) of the central nervous system. The BACE polypeptide is useful in screening methods to identify agents that may act as modulators (c.g. baCE activity and in particular agents that may be useful in treating to Nogo-associated diseases. The modulators of Nogo or BACE polypeptides, and the polymucleotide encoding the BACE polypeptide are useful in cresponsive to the modulation of Nogo activity, in alleviating the symptoms or improving the condition of a patient suffering from this disorder, in axon regeneration, or in preventing metastasis or spreading of a cancer. The polymucleotide may also be an essential component in cassays, a probe, in recombinant protein synthesis, and in gene therapy control of the invariance of the human NogoC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Identifying modulators of Nogo or BACE activity for treating acute neuronal injuries, neoplastic or dysproliferative disorders, comprises providing and monitoring interaction between Nogo and BACE polypeptides.
                                                                                                       Human; Nogo; BACE; acute neuronal injury; spinal injury; head injury; stroke; peripheral nerve damage; neoplastic disorder; glioblastoma; neuroblastoma; hyperproliferative disorder; dysproliferative disorder; cirrhosis; psoriasis; keloid formation; fibrocystic condition; cancer; tissue hypertrophy; central nervous system; axon regeneration; NogoC; Nogo-associated disease; metastasis; gene; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            U, 0 Other;

                                                                                                                                           Human cDNA clones represented in AAF98374 - AAF98489 encode secreted proteins AAB90667 - AAB90750. The cDNA clones are isolated from various tissue types, and may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate protein expression. The polypeptides and nucleic acids may be used as nutrients or to modulate cytokine and cell proliferation/differentiation activity and may also be involved in modulation of the immune system. The cDNA sequences, proteins, their agonists and/or antagonists exhibit haematopoiesis regulating activity; tassue growth activity; activin/inhibin activity; chemokinetic activity; haemostatic and thrombolytic activity; ceceptor/ligand activity; anti-inflammatory activity; haematopoiesis activity cadherin/tumour suppressor activity; and/or tumour inhibition activity. Included in the invention are probes represented in AAF98872 which are specific for the CDNA clones encoding the secreted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   100
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  140
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  160

The invention relates to 625 polynucleotides which have been derived from a variety of human tissue sources and which encode novel secreted proteins, their complements and sequences that hybridise to them. Also included are a vector comprising the polynucleotide, a host cell canisodies that bind to the proteins encoded by the polynucleotides, and the proteins and identification of modulators of the proteins or the expression of the polynucleotide. The polynucleotides can be used as probes for the identification and isolation of full length contains and genomic DMA. The polynucleotides and proteins can also be used as nutritional supplements. The protein is useful in the treatment of various immune deficiencies and disorders such as viral infections, carious immune deficiencies and disorders such as viral infections, carious immune deficiencies and disorders (e.g. asthma). They are also useful for treating neutodegenerative diseases (e.g. asthma). They are also useful for treating neurodegenerative diseases (e.g. Alzheimer's disease), liver fibrosis, coagulation disorders (e.g. haemophila), inflammatory disorders (e.g. crohn's disease) and disorders (e.g. haemophila), inflammatory disorders (e.g. crohn's disease) and disorders (e.g. haemophila), inflammatory disorders (e.g. crohn's disease) and districtions (e.g. when the contains and conditions (e.g. crohn's disease) and disorders (e.g. crohn's disease) and disorders (e.g. crohn's disease) and disorders (e.g. crohn's disease) and disorders (e.g. crohn's disease) and disorders (e.g. crohn's disease) and disorders described and disorders described and disorders described and disorders described and disorders described and disorders described and disorders described and disorders described and disorders described and disorders described and disorders described and disorders described and disorders described and disorders described and disorders described and disorders described and disorders described and disorders described and disorders described and disorders d
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Six hundred and twenty five polynucleotides derived from a variety of human tissue sources which encode secreted proteins, useful for treating immune deficiencies and disorders such as autoimmune disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; ss; gene; secreted protein; immune deficiency; viral infection; bacterial infection; fungal infection; autoimmune disorder; burn; theumatoid arthritis; multiple sclarosis; autoimmune thyroiditis; diabetes; allergy; asthma; neurodegenerative disease; Crohn's disease; Alzheimer's disease; Parkinson's disease; liver fibrosis; tumour; tissue regeneration disorder; haemophilia; inflammatory disorder; ulcer; tissue regeneration; wound healing; haematopolesis; myeloid deficiency; lymphoid cell deficiency.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              and in the treatment of burns, incisions and ulcers. The proteins are also useful for regulating haematopoiesis, for treating myeloid or lymphoid cell deficiencies. The present sequence is one of the 625 CDN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Resnick RJ;

ARD08345-AAD08394 represent cDNAs corresponding to 50 human secreted

protein genes and AAE03898-AAE03947 represent the proteins they encode.

AAE03948-AAE03996 represent human secreted protein fragments or variants.

CT he genes and their secreted proteins are useful for preventing, treating

cr ameliorating medical conditions, e.g., by protein or gene therapy.

CT pased on the tissues in which they are most highly expressed, and include

CT based on the tissues in which they are most highly expressed, and include

CT che new genes. Specific uses are described for each of the 50 genes,

CT che new genes. Specific uses are described for each of the 50 genes,

CT che new genes. Specific uses are described for each of the 50 genes,

CT check cancer, tumours, foetal and developmental abnormalities,

CT developing products for the diagnosis or treatment of proliferative

CT developing products for the diagnosis or treatment of proliferative

CT disorders, cancer, tumours, foetal and developmental abnormalities,

CT disorders, cancer, tumours, foetal and developmental abnormalities,

CT disorders, cancer, tumours, for schizophrenia, asthma, sith disorders, and include

CT cognitive disorders, genizophrenia, asthma, sith disorders,

CT cognitive disorders, chilabetes, atherosclerosis, cardiovascular disorders,

CT cognitive disorders, diabetes, atherosclerosis, cardiovascular disorders,

CT creamers, and in chemotaxis, atherosclerosis, cardiovascular colors

CT preservative to modify storage properties. Antibodies specific for a

CT preservative to modify storage properties. Antibodies specific for a

CT preservative to modify storage properties. Antibodies specific for a

CT preservative to modify storage properties. Antibodies specific formance with the disorders mentioned above, and in diagnostic immunosassay or environment and properties and in diagnostic immunosassay or environment and properties and in diagnostic immunosassay or environment and properties are allowed to an environment and an environment and an

The invention relates to a purified nucleic acid molecule associated with lactation or muscle and fat deposition (designated LMFD), derived from cattle, and the LMFD nucleic acid can specifically hybridise to a second nucleic acid molecule comprising any of 15112 nucleotide sequences.

Complements as ABX34836-ABX4937, or complements of them. Also included are interested acid molecule comprising an LMFD nucleic acid linked to a promoter and a 3' non-translated sequence that functions in the cell to cause termination of transcription and addition of polyadenylated ribonucleotides to a 3' end of the mRNA molecule; and comprising a level or pattern of a molecule acid (comprising any of the 15112 nucleic acid sequences or its complement or fragment) with a complementary nucleic acid sequences or its complement or fragment) with complementary nucleic acid molecule obtained from the bovine cell or tissue, where hybridisation between the marker nucleic acid and the complementary nucleic acid permits the detection of the molecule; and (b) detecting the level or pattern of the complementary nucleic acid is predictive of the complementary nucleic acid permits the detection of the molecule.

Complementary nucleic acid permits the detection of the molecule; and (b) detecting the level or pattern of the complementary nucleic acid is used for the detection of the molecule. The LMFD nucleic acid is used for clevel or pattern of the molecule. The LMFD nucleic acid is used for the section of the molecule. The present sequence is one of the complement sequence is one of the present sequence is one of the present sequence acid in the sequence in the part of the present sequence is not and analysis. 116 121 96 181 9/ 61 present sequence was not shown in the specification but was obtained in electronic format from the USPTO web site: 62 GTGATCCAGGCTATCCAGAAATCTGATGAAGGCCACCCATTCAGGGCATATTTGGAATCT 2 Acesectacarrecerresererererereserareaserrrassarararasser 97 AsnCysThrIleLysGluLeuArgArgLeuPheLeuValAspAspLeuValAspSerLeu 37 ThralaTyrileAlaLeuAlaLeuLeuSerValThrIleSerPheArgIleTyrLysGly 77 GluValAlaIleSerGluGluLeuValGlnLysTyrSerAsnSerAlaLeuGlyHisVal 122 GAAGTIGCTATATCIGAGGAGTIGGTICAGAAGTACAGCAATICIGCTCTIGGTCAIGTT 57 ValileGlnAlaileGlnLysSerAspGluGlyHisProPheArgAlaTyrLeuGluSer Sequence 422 BP; 109 A; 79 C; 94 G; 140 T; 0 U; 0 Other; 44 00 00 00 00 breeding, or for genetically improving cattle US-09-830-972-29_COPY_990_1178 (1-189) x ABX43312 (1-422) segdata.uspto.gov/sequence.html?DocID=20020137139 Matches: Conservative: Mismatches: Indels: Length: Claim 2; SEQ ID NO 8477; 245pp; English 3.14e-75 695.00 100.00% 100.00% 74.65% Percent Similarity: Best Local Similarity: Query Match: DB: Alignment Scores: Score: g ð 셤 g Š ð ò
